SUMMARY

Software Developer with a strong focus on modern frontend technologies and a proven track record of building practical web applications for process digitalization. I specialize in developing intuitive and efficient user interfaces, while also working with APIs and data integration to enable seamless system communication. With a solid background in system administration (Windows, Microsoft 365, infrastructure), I bring a broader understanding of how applications operate within enterprise environments. I actively leverage modern AI-assisted development tools to improve productivity, code quality, and solution design.

EXPERIENCE

Software developer

2023 - present

Adria Mobil d.o.o., Novo mesto

Key responsibilities:

- Developed and maintained web applications focused on process digitalization and operational efficiency
- Designed and implemented responsive user interfaces with emphasis on usability and performance
- Designed and optimized data handling and state management for real-time applications
- Worked with JSON-based data structures for efficient data transfer and processing
- Implemented and consumed REST APIs for system integration and data exchange
- Applied AI-assisted tools to accelerate development and improve solution quality
- Used Azure DevOps and Git for version control, work item tracking, and collaboration within development workflows
- Designed and maintained the company's corporate website, improving UI/UX and ensuring performance and responsiveness

Projects

Supplier Portal (work in progress) - Dashboard web application for procurement and logistics teams to manage and monitor orders across the supply chain, used by both internal users and external suppliers for centralized visibility and interaction with order data. Integrated with ERP systems via REST APIs using .NET and Angular to ensure real-time data synchronization and consistency across systems.

InventuraOS - React Native Android app designed for efficient and accurate annual inventory audits. Optimized for Zebra barcode scanners, this app ensures quick and seamless inventory checks, making the audit process straightforward and hassle-free.

Production counter - Production counter web application built with React, Tailwind CSS, and APIs, enabling tracking of planned vs. actual production, real-time production line status, and data visualization through interactive graphs.

Job travel report - A web application enabling users to easily fill out, review, and print job travel forms. Streamlined for efficiency, it simplifies the process of documenting travel details for work-related purposes.

System Administrator

2017 - 2023

Adria Mobil d.o.o., Novo mesto

Administered a Windows-based enterprise environment (500+ users), including Active Directory and Microsoft 365 (Entra ID, Exchange Online, Teams), managing user lifecycle, access control, and endpoint deployment using PDQ tools. Monitored system performance, resolved incidents, and automated tasks with PowerShell, while supporting basic networking and security operations. Provided user support and maintained IT asset and system documentation.

SKILLS

HTML CSS JavaScript Typescript React
React Native GIT REST APIs UI/UX
Angular TailwindCSS Azure DevOps IT hardware
MS365 environment Communication Troubleshooting

PORTFOLIO
